PROVISIONAL AWARD

After the deadline (30-10-2017), I received from the director all studies in format pgn and PDF, which are exposed on the UAPA's web page.

In the analyses, and subsequent evaluation of the studies, I have taken into account the technical aspects, and in particular the thematic requirements of Section A,

The variety of configurations, in some way, makes comparisons difficult, and therefore the assignment in the order of merit of the studies presented in these tourneys, but the task it was nice for me due the great number of composers that responded to this convocation.

In principle, all studies, with the exception of one, are technically acceptable.

In this informal tournament, people can see in the web page, studies of all levels on technical and artistic aspects.

A special thanks to the Union Argentina de Problemistas de Ajedrez (UAPA) by appointing me as a judge of such an important event, also to all participants of this tournament

Following, the studies included in the awards of each section:

Section A: Thematic - Domination
Theme: Minors pieces against the Queen

We received 15 entries from 10 authors. Among entries were five joint compositions.

It is difficult to show new ideas in a domination theme. The great classics have already showed all the essential motifs. Of course, the complex structure (two or more main lines or thematic tries, multiphase study) are very likely to be original. I like it when in the key position black is in zugzwang, or minor promotion occur.

So, my ranking is:

Of the two thematic versions, especially 6 ...Qh6 is strong. Here, white avoids the three stalemate traps, and after a nice step (7.Bc6) black is in zugzwang. Finally, white has a spectacular Knight-sacrifice, and with a battery it captures the queen. Very rich composition!

After a short, but interesting introduction play, the black King is in a tight position: Nf7 threatens mate. In both main lines, black's counterplay is based on his pawn moves. If white makes mistake, then the black queen breaks out. However, white plays good, then black is zugzwang more times. At the end of game the 'h' pawn is forced to move, and N-fork captures the queen.

A classic-style composition. I like it, there is no introductory play, the study starts with the theme-like section. White pursues the king, then 7.Ng7 attacks the Queen. It is great that Black has six choices, but white captures the Queen with nice motifs (bishop sacrifice, double attack, battery) in all variations.

 In the introductory play white shows two spectacular deflection sacrifices. Interesting is their reasoning. Then three white minor piece fight against the black queen. White first eliminates a2 pawn, then he forces the black to zugzwang position by a surprising move (10.Bb7!). Black tries a stalemate trick yet, but this easy to avoid.

Section B.1. Studies Win

We received 30 entries from 23 authors. Among entries were seven joint compositions.

The place of study is between practical play and problems. So tactics and strategy are important. The economics of the elaboration, the fine, silent moves are valuable. The use of complex structures is a serious value! The chess-capture series often are spectacular, yet they give a rough impression.

There are many options available for both sides, at the starting position and later on. This is chess! The versions are not long, the study can be solved by man. After 3 ... Qxd4, white forces black's figures to wrong fields with a surprising line-up knight sacrifice. The end of the game is a self-block mate, but I don't think that this is the theme of the study. One sideline of 'A' ends with mate also , but it is not a self-block mate. I think in 'B' the main line is 7 ... hg3, because it ends with a mate. Thus, 'A' and 'B' harmonize with each other.

There is a brilliant thematic try here. After the rook sacrifice, the main line and thematic shows a fine strategic play similar to practical play. Of course, the study is of artistic value. Not just due the sacrifices. It is a very deep thought to choose between 5.Rf7 and 5.Rh7, and the justification for it.

A natural position sets on the board after the first pair of moves. White has a little material advantage, but this is not easy to enforce. White develops his position with silent moves, and black defends fine. White can not win merely by strategic way, so he begins a tactical attack 7.Qg5+. Finally he creates the winning battery by the queen sacrifice. A very well built study.

The black king is in a tight squeeze, destiny is over the black every move. White does not let off the black king from h6. The black is defending with a spectacular queen sacrifice and with queen promotion. white avoids even a simple trap on the end of game, and after a nice queen sacrifices is the model mirror mate the game is over

The study is based on a great combination. 6.Qg7!! is a surprising sacrifice, and this is not the end of the game. Black's counterplay is simple, but white must play exactly. Interesting sideline is 1 ... c4 + also.

Two fine sacrifices on g1, so the black queen can't escape from the corner. If the black queen captures white's minor pieces, then geometric motifs wins. 4.Rg5 would win immediately, but the black has pawn moves yet. White avoids the zugzwang position and wins.

This study is in classic style. There are a very good thematic try, this harmonizes with the main line perfectly. White avoids the threats with queen sacrifices, and it seems that he reaches the draw with perpetual check. The black rebuilds his threats with a spectacular queen sacrifice, and he promotes his pawns to queen on f1 or a1. In the both variants the perpetual check rescues the white.

This study has a very well justified introduction play with a thematic try. This is related to one of the draw positions. The main line white has a rook disadvantage, and he defends with stalemate threats. If black avoids these, so the pawn give the draw against black rook. In the thematic try white lost in a similar position, because missing one tempo.

Very sympathetic work! All versions are humanly solvable and fun. Of these, it leads to more practical endgame. Good! The game is beautifully built up to the culmination of the work. It then appears white can't stop the mate threat, or don't know avoids the material disadvantage. After a surprising bishop and queen sacrifice the stalemate is unavoidable.

The structure of study is complex, with excellent strategic content. There are two white and one black queen promotions here. Black has a hidden winning position, but this is not visible easily. White avoids this in main line with an impressive queen sacrifice on g1. The other queen sacrifice on g2 leads to the thematic try.

Why sp. prize? It may well be that this work does not accumulate more shining tactical motifs. Otherwise the exact maneuver of the white rook is very valuable. Black doesn't capture the rook, so avoids the stalemate, but the play leads to a positional draw. The try seems to be good, but finally black wins by a surprising Knight fork. Fine work.

After 5.Kb2 the play is nice. Black has more mate threats, white avoids these with sacrifices. The pendulum moving of queens are beautiful. The hard introduction play leads to a difficult variations. I think, it's not easy to evaluate the 4th Qg2 version by one man.

It's a very cute little work. The key motif is simple: the wrong corner lead to draw, but white must capture both 'f' pawns.. In the main version this succeeds, but in the thematic try doesn't. The blacks counterplay is based on impressive sacrifices: 1 Bg3 +, 2 Re3 +. Nice.

Two knights vs. rook and bishop in two main lines. Not easy to find the best play of white, especially after 3 ... Rc7. White creates threats through silent knight moves, and reaches the draw by forks. Remarkable composition

White has a great material disadvantage, but with the forward movement of his pawns, provokes serious threats. The main version quickly simplifies the position. Black keeps the initiative with an excellent move. 7 ... Rc6! White defends with fine silent moves, so it protects and eliminates any dangers. The sidelines of the work are also interesting. In the introduction play, in two side variants the knight promotion save the game.
